Heartbeat® supports

**CLIMATE
SURVEYS**

Climate surveys alone aren't enough

Instead of static surveys or curriculum built for the center, Heartbeat brings recurring cognitive power to your classroom. By giving students 5-10 minutes, 2-3 times/week in the tool they'll have access to personalized Insights & Actions about themselves to improve and unblock their learning journeys.

Because of its recurring nature, the information given to students and educators grows and changes with them so you can consistently have a pulse on them throughout the year.

How Heartbeat solves the Climate Survey need

Bridge the gap between climate surveys. How do you know what's happening outside of those snapshots? Teachers are overburdened. Asking them to process climate survey data and do something is too much. Heartbeat gives students & educators immediate feedback while giving you the larger analytics view you need.

Heartbeat provides a student-first lens to data. Nothing is weaponized, but it's still actionable keeping you away from student labeling

How Heartbeat is implemented in your school

Heartbeat covers many dimensions tracking a students' view of their classroom and campus climate. Heartbeat is implemented in a specific period for 5-10 minutes, 2-3 times per week so every student has the time and space to learn about their own superpowers and challenges, as well as educational preferences.

Administrators "favorite" 5-10 climate specific dimensions to track trends, read insights, and apply actions campus-wide. These favorites can change over time so they are always focusing on their individual needs of the current month/moment.
